

## **Nix® Premium Metal Two-Sided Comb**

### ***For Removing Head Lice and Nits***

***(To effectively stop head lice infestation, all nits must be removed.)***

Nix Crème Rinse kills head lice but does not remove the dead lice or nits. Combing is the only way to effectively remove the dead lice and nits. The two-sided metal Nix comb simplifies this process. After washing hair and then treating head with Nix Crème Rinse, use the wide-tooth side of comb to work through thick hair, tight curls, snarls and tangles. Use the smaller-tooth side of the comb on damp, clean and tangle-free hair and begin the comb-out to remove dead lice and nits, starting from the roots.

***Directions*** Follow these steps for effective removal of dead lice and nits:

- After shampooing and treating with Nix Crème Rinse remove tangles from damp hair with wide-tooth side of comb. Apply Nix Gel to facilitate comb out and keep hair damp.
- Making sure hair is still damp, part the hair into four sections. Work on one section at a time. If hair begins to dry out while working on it, dampen again.
- Take one section, hold out and get teeth of the smaller-tooth side of the comb as close as possible to the scalp. Comb with a firm, even motion away from the scalp to the end of the hair.
- Clean the comb frequently as you work on the hair. Wipe the dead lice and nits from the comb with a tissue and discard in a plastic bag to prevent the lice from recurring.
- Pin finished sections back to avoid recontamination from remaining nits.
- After combing, recheck the entire head for nits and repeat combing if necessary.
- Check the affected head daily to remove any nits you may have missed.
